The Definition of Done

DoD for user stories:
- Commenting
  - Users can post comments and view other's comments
- Comment liking / disliking
  - Users can like and dislike comments
  - Users can see if they have liked or disliked a comment
  - Users can see the total number of likes and dislikes on comments
- Sort comments by date or popularity or likes
  - Users can sort comments chronologically or by number of likes
- Implement creating replies
  - Users can reply to an existing comment with a comment of their own
  - Replies appear under a top level comment in the form of a comment thread
- Google account authentication
  - Users can login using their Google account
  - Users can be recognized by their username and profile picture

DoD for tasks:
- Code checked into repository
- Code reviewed by team members before merging branches
- Unit tests pass
- The HTML mimics YouTube's styling

The definition of done was enforced in each group meeting.

Style Guide:
- Code is formatted following the configuration file in the repository using Prettier with the npm run format command.
- Code has no linter errors under the Google and TypeScript ESLint configurations with the npm run lint command.
- All code is written in TypeScript if possible with proper type annotations where required.
